

Strict resolution hierarchy

acts only on lower layers; output is a Form

Layer 3: $D_{[\mu}F_{\nu\rho]} = 0$ (Bianchi)

Layer 2: $R^{ab} = d\omega^{ab} + \omega \wedge \omega$

Layer 1: $T^a = de^a + \omega^a_b \wedge e^b$

Layer 0: Forms e^a_μ

Constraint-attractor cycle
